SYPHILIS ANTIBODY TEST

<u>Test</u>	<u>Result</u>	<u>Unit</u>	<u>Biological Reference Interval</u>
Syphilis Test (Automated) <i>Method : CLIA</i>	: 0.13	S/CO	Non - Reactive : <0.90 Equivocal : >= 0.9 - <1.10 Reactive : >=1.10
Syphilis Interpretation	: Non-Reactive		

Note :

- This test is specific for the Qualitative detection of antibodies to Treponema pallidum/Syphilis(TP) test in human serum.
- This is screening test and hence the results are indicative only.
- Test results should be used in conjunction with clinical symptoms and other diagnostic test results.

Erythrocyte Sedimentation Rate (ESR)

<u>Test</u>	<u>Result</u>	<u>Unit</u>	<u>Biological Reference Interval</u>
ESR	: 9	mm / 1hr.	0 - 10

Method : Westergren

Method : Westergren Done on Fully Automated Cube 30 Touch ESR Analyzer (Diesse) ...

- Although the ESR is a non-specific phenomenon, its measurement is clinically useful in disorders associated with an increased production of acute-phase proteins.
- In rheumatoid arthritis or tuberculosis, it provides an index of progress of the disease, and it is of value in diagnosis of temporal arteritis and polymyalgia rheumatica. It is also useful as a screening test in the routine examination of patients.
- The ESR is higher in women than in men, and correlates with sex differences in fibrinogen levels.
- The ESR is influenced by age, stage of the menstrual cycle and drugs (eg: corticosteroids, contraceptive pills, etc), it is especially low (0-1 mm) in polycythaemia, hypofibrinogenaemia and in congestive cardiac failure, and when there are abnormalities of the red cells such as poikilocytosis, spherocytosis or sickle cells.
